

You can't describe it. You have to quilt with it and when you do, you will have a smile on your face.

Freddie

It takes more than five weeks to handcraft an APQS longarm from the finest materials available. All APQS machines are handcrafted in Carroll, Iowa, using the same techniques, materials and craftspeople. The Freedom is a machine that performs extremely well in homes, teaching studios and commercial quilt shops.

FEATURES AND BENEFITS

The simple touch pad and handle-mounted controls enable you to operate and control your quilting with the touch of a button. Standard features like the thread break sensor, low bobbin alert, stitches per inch selector and the single stitch mode, all work together to make the Freedom simple to learn and easy to operate. You will be able to complete projects faster and easier than you ever dreamed possible.

The stitch regulator is the heart and soul of any longarm, and in 1998 APQS had an innovative breakthrough. We developed what is known as Adaptive Logic Stitch Regulation™. This APQS invention performs with the skill and grace of a ballet dancer making all your stitches extremely precise and accurate – where you want them,

when you want them. This makes quilting fun and easy, reducing your practice time, and letting you always start and stop with beautiful consistent stitches.

The tracking or movement system is an extremely important part of any longarm. APQS developed a revolutionary new movement system. Exclusive to APQS machines, the Bliss™ track system provides smooth and easy machine movement enabling hours of effortless quilting.

Freedom is made in America and is backed by a lifetime warranty. Our service and education are unrivaled and have been part of our legacy for more than 30 years. Our customer support and trained service technicians are never more than a phone call away to help you with the care and feeding of your brand new APQS longarm.

Whether you are an aspiring quilt artist or just want the joy of quilting in your home, there is an APQS longarm built especially for you.

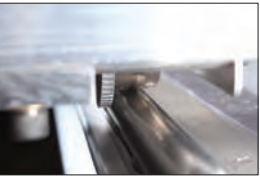

The **Simple Touch Pad** allows you to quickly learn how to easily change or save your quilting preferences with the touch of a button. Start quilting with your default preferred setting. You can change your stitch length or return to your favorite stitch length with just one touch. Know with certainty when your bobbin is about to run out with the low bobbin indicator.

Our **Adaptive Logic Stitch Regulator™** is the most precise in the industry, providing accurate stitches – where you want them, when you want them.

Smooth and easy to move. The **Bliss™** track system option eliminates resistance found in traditional longarm track systems. The Bliss™ track system provides smooth, effortless and easy movement enabling hours of quilting.

Quilt Path™, APQS' computerized quilting system makes precision quilting fun and easy. It is easy to learn and an affordable option.

Why choose the APQS Freedom

- Simple to learn and easy to use. Be a quilter, not a mechanic.
- Most precise stitch regulator in the industry. Accurate stitches – where you want them, when you want them.
- Our simple touch pad and control buttons on the front and back of the machine allow you to quickly learn and operate the machine.
- Exclusive Bliss™ track system provides smooth and easy machine movement enabling hours of effortless quilting.
- Lifetime warranty – handcrafted in America and built to last.
- Lifetime customer support – unrivaled service and education.
- Exclusive Quilt Path™ computer system is affordable, fun and available on all APQS longarm models.
- Streamlined table design with timesaving accessories.
- Low bobbin indicator so you know when it's time to change your bobbin.
- Top thread break sensor which alerts you if the top thread breaks so you can quickly get back to quilting.
- Multi-positional handles are fully adjustable, giving you greater control for all styles of quilting.
- Simple thread path reduces tension problems and makes changing thread easy.
- Interchangeable hopping foot lets you customize your machine's feet based on the kind of quilting you do.
- Stand alone APQS turbo bobbin winder.
- Exceptional value.
- Free beginner class.
